

## **BridgeMe UNESCO Club Update**

The last several months, BridgeMe has been working on a new project that operates at the intersection of culture and healthcare. We are currently connecting youth around the world to converse about culturally preventable healthcare problems with the intent to create solutions to counteract these issues. With these exchanges, we have written blogs which are hosted on our website and offline. A few notable conversations and projects include:

- Relationship between exercise and bone density degradation:  
<http://www.bridgeme.org/#!/Osteowhaaa/ciix/23BA361C-AFA9-4ABD-94CE-9F128AFA58EB>
- Culture of tanning leading to skin cancer in the U.S.:  
<http://www.bridgeme.org/#!/Staying-Cool-in-the-Sun/ciix/D22F7CB2-F5FF-4F87-8DFC-1C4E599CC94E>
- How the fast food craze is causing obesity and heart disease:  
<http://www.bridgeme.org/#!/Whats-the-middle-ground-/ciix/A492DCE6-16C5-4B6E-BCD6-5ED5B7832750>
- A group of Turkish and American students are working together to bring healthy juices to a Turkish university in Istanbul

Over the next few months, BridgeMe hopes to expand the healthcare/culture project to many more universities around the world!
